

# How did the health care and financials sector compare in total revenue for year 1?

When looking at the histograms for total revenue generated by the health care and financials sectors, both skew right. In other words, the mean is greater than the median for the two sectors.

The mean for health care is \$20 billion, while financials is slightly higher, at \$21.4 billion. The median is also higher for financials at \$10.2 billion compared to health care, at \$7.5 billion. Based on the information, the financials sector has a higher total revenue average than the health care sector. When looking at the standard deviation, it is higher for health care sector, at \$30.3 billion, compared to financials, at \$27.9 billion. In other words, the spread is wider for the health care sector, with over 75% of the companies reporting total revenue that is less than the mean. The variability is higher in health care than in financials.
